

FMEA

Failure modes and effects analysis (FMEA) is a step-by-step approach for identifying all possible failures in a design, a manufacturing or assembly process, or a product or service.

Failure modes and effects analysis also documents current knowledge and actions about the risks of failures, for use in continuous improvement. FMEA is used during design to prevent failures. Later it's used for control, before and during ongoing operation of the process. Ideally, FMEA begins during the earliest conceptual stages of design and continues throughout the life of the product or service.

We educate and train your people giving them the knowledge and confidence to assess and eliminate or reduce risk through the use of FMEA (Failure Modes Effects Analysis) on capital projects, new processes and new products saves organisation's time and money.

We have run FMEA training courses for organisations in many sectors and many sizes. These workshops have enabled those organisations to react faster to predicted events, implement projects faster and improve customer satisfaction.

This team based approach to risk analysis focuses on identification and scoring of risk and the creation of actions to remove these risks moves an organisation from being reactive to problems to being proactive creating an advantage over your competitors. The participants will have created a FMEA for the organisation by the end of the workshop.

Duration

The FMEA (Failure Modes Effects Analysis) workshop is a 2 day workshop split into theory and practical sessions.

Day 1:

- FMEA Facilitation Skills.
- Team Dynamics
- Questioning & Listening Skills

Day 2:

- FMEA Terminology
- Roles & Responsibilities
- How to identify failure modes, causes & controls
- How to use FMEA to improve customer value by identifying and preventing problems.

Deliverables

- Templates to assist in the creation & scoring of FMEAs.
- A defined methodology to identify and quantify risk to the organisation & customers.
- Steps needed for successful deployment into your organisation.
- A methodology to promote knowledge sharing & reuse and put an end to firefighting.

Who should attend?

This workshop introduces a process to enable effective identification & mitigation of risk in your organisation and is suitable for people from Design, Customer Service, Quality, NPI, Production and Engineering. Increasingly service organisations are using FMEA to improve customer satisfaction and where projects must be delivered on time and on budget.

Why Pragmatique?

Our portfolio of skills and experience enable us to deliver a workshop that will deliver real benefits for your business.

As we are independent we can drive the process, asking the difficult questions and not accepting the obvious answers to ensure you receive the full benefit from our involvement.

About Pragmatique

Our successful clients describe us as a company of talented professional consultants with the knowledge & experience in areas of the business they need.

We provide consulting, training and interim support to enable our clients to get even better results from their people, their processes and their projects.

In short: we provide the know how to effect the change but leave you with the know how to develop our solution.

Visit our website to find out about all our service offerings and how we could help you.
